Abstract:

Time has transformed and we live in an era where we all are more reliant on ICT & technology nowadays. Cell phones are in practically every pocket, cars operate on electricity, and televisions are now referred to as smart tools for education. The process of obtaining an education has also changed a lot because of technological bandwagon. There is possibilities for very easy way of online learning, it's only a matter of time, it may be the only learning mode of education in coming days. Is, however, online education the best option? There are arguments on both sides, though in the end, it comes down to an individual's personal option for how they want to get their education.

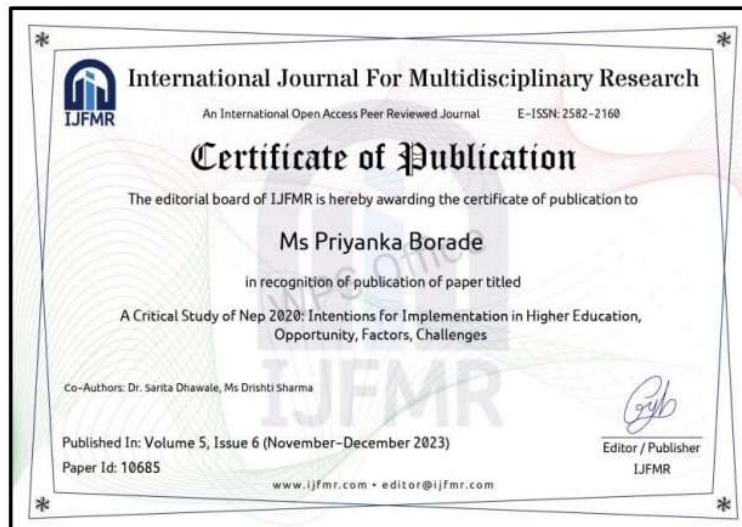

There are reasons on both sides, although in the end, it comes down to a person's own preference for how they wish to obtain their education. Students acquire knowledge in a variety of methods. Some students prefer online classes, while others prefer classroom instruction, and still others prefer a combination of the two. All modes of learning have advantages and disadvantages, indicating that there is no one-size-fits-all approach to learning. However, in a world where practically everything is moving toward technology, online learning may be the greatest option for the first time. Throughout this study, the researcher will support online education while discussing some of its benefits and drawbacks. My selection was determined by two main factors: the effectiveness of online education and the consequences it has on learning outcomes. Solution to improve class attendance by making it more participatory and result-oriented.

Keywords: ICT, online learning, online education

Introduction:

The terrific and devastating impact of pandemic has agitated the world to its depth. Moreover, most governments round the planet may have briefly closed academic establishments in a trial to halt the unfolding of the pandemic. In our country, the govt. has finished off all educational establishments as a part of a nationwide interment, touching students starting from grade school students to scholar candidates. These nationwide disruptions have an effect on over ninety per cent of the world's student population. Many alternative countries have enacted localized closures touching millions of students. In line with UNESCO, nearly thirty two large integer students
