

7.1.4 Water conservation facilities available in the Institution

Rainwater harvesting

Rainwater from the rooftops is integrated through a network of pipelines. This is then used to replenish the underground water system.

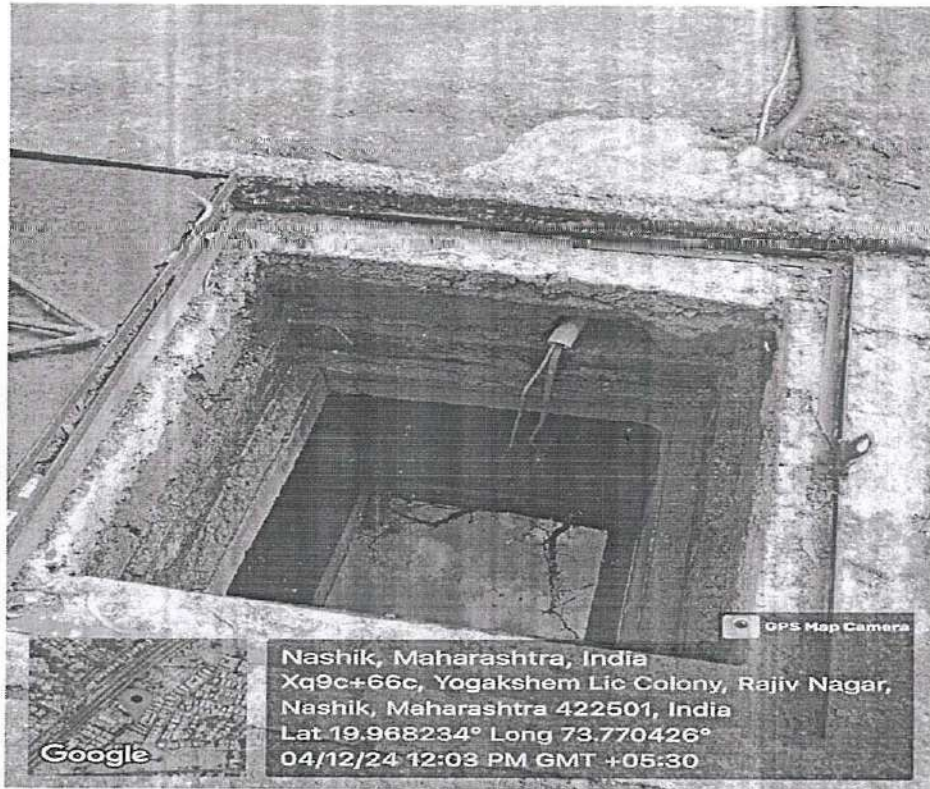

Through our initiatives and awareness programs, we strive to create a more water-conscious and environmentally-conscious community within our institute and beyond.

Construction of bunds

Maintenance of water bodies and distribution system in the campus

The ground water is pumped into storage tanks located at different places in the campus. There are numbers of overhead storage tanks in the campus. The water is distributed through well laid pipe network. The water from overhead tank is distributed to all taps across the campus. Our institution plumbers maintain the plumbing system. Whenever the problems are identified immediate actions are taken for restrict wastage of water.
